

### S.21.03 – Non-life distribution of underwriting underwriting risks – by sum insured

#### General comments:

This section relates to annual submission of information for individual undertakings.

The template is retrospective and shall be filled in relation to non-life business (including Non-SLT Health) only for the direct business and only for the Non-life Lines of Business (lines of business, as defined in Annex I to Delegated Regulation (EU) 2015/35).

The underwriting risk portfolio is the distribution, in (predefined) brackets, of the sum insured of each and every single underwriting risk which have been accepted by the undertaking. The underwriting risk portfolio is per line of business. However, whereas some lines of business are reportable on a compulsory basis for all member states, the individual member states may also require compulsory basis reporting for further lines of business where deemed to be relevant. For certain lines of business, the template would not be applicable. (See also item Line of business).

The default brackets to be used are defined in euros. For different reporting currencies each relevant supervisory authority shall define the equivalent options for the amounts to be used in the 20 brackets.

An undertaking may use undertaking specific brackets, in particular when sum insured is lower than EUR 100 000. The brackets chosen shall be used consistently over the reporting periods, unless the distribution of claims changes significantly. In this case the undertaking shall notify the supervisory authority in advance, unless already specified by the supervisory authority.

By default the reference date shall be the end of the reporting year, however if duly justified, the undertaking may choose the reference date of collecting the information from the policy administration. This means that the underwriting risk portfolio can be based for example on the same reference date that is used to collect similar information for the renewal of reinsurance treaties and facultative cover.

The sum insured relates to each and every individual underwriting risk, only looking at the main coverage of the policy per line of business, and means the highest amount that the insurer can be obliged to pay out. This means:

- If the sum insured of the additional cover for “Theft” is lower than the sum insured of the main cover for “Fire and other damage” (both belonging to the same line of business), the highest sum insured must be taken.
- A policy cover comprising a number of buildings across the country/car fleet etc must be broken down.
- If the risk has been accepted on a co-insurance basis, the insured sum indicates the maximum liability of the reporting non-life insurer.
- In case of joint liability through co-insurance, the part belonging to a defaulting co-insurer must be included in the sum insured as well.
