

S.36.02 – IGT – Derivatives

General comments:

This section relates to annual submission of information for groups.

This template shall report all IGTs between entities in scope of group supervision according to Article 213 (2) (a) to (c) of Directive 2009/138/EC, irrespective of the choice of calculation method or whether sectoral solvency rules have been used for the purposes of the group solvency calculation.

This template shall include IGTs that were:

- in-force at the start of the reporting period.
- incepted during the reporting period and outstanding at the reporting date.
- incepted and expired/matured during the reporting period.

Where similar transactions with a related entity may be excluded from IGT reporting when considered individually against the thresholds for significant and very significant, these transactions must nevertheless be reported individually where collectively, they are at or above the corresponding threshold values for significant or very significant IGTs.

Each transaction shall be reported separately.

Any additions / top-ups to significant IGTs shall be reported as a separate IGT, even if the top-up in its own right falls below the significant threshold limit. For example, if an undertaking increases the initial loan amount to another related undertaking the addition to the loan should be recorded as a separate item with its issue date as the date of the top-up.

Where the transaction value is different for two transacting parties (e.g. a €10m transaction between A and B where A records €10m but B only receive €9.5m because of transactions costs, of say €0.5m has been expensed) the template should record the maximum amount as the transaction amount, in this case €10m.

Where there is a chain of related IGTs (say A invests in B and B invests in C), each link of the chain needs to be reported as a separate IGT.
